Plants, Plants and More Plants!

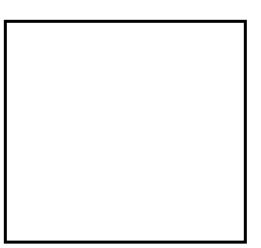

Name:

Date:

Animal Behaviors That Lead to New Plants

Go on an investigation through your outdoor classroom. Check the behaviors that you observe that can lead to new plants growing. Then draw one of your observations in the box provided.

- Pollinators moving pollen from flower to flower
- Bird droppings with seeds
- Birds eating at feeders and dropping seeds
- Burrs in fur on wildlife
- Scat with pits or seeds

Specialized Plant Structures That Lead to New Plants

Select a plant in your Outdoor Classroom. Draw it in the box provided. Analyze the plants and check any specialized structures.

Plant 1	Plant 2
Flower Brightness	Flower Brightness
🗖 Nectar	🗖 Nectar
Odor to Attract Pollinators	Odor to Attract Pollinators
Hard Outer Shells on Seeds	Hard Outer Shells on Seeds

Based on your analysis of the two plants above, which do you think will have the greater probability of successfully reproducing? Plant 1 or Plant 2? Why?
